

FEATURES & BENEFITS

silicone oil for many practical applications

LOGISTIC DATA

Type	C-70/200 ML
Index Ergom	E05CE-01010101801
Quantity in package [ml]	200

It is medium viscosity silicone oil which penetrates and reaches the most hidden points, spreading on all surfaces: it effectively lubricates every part. Excellent regenerative and protective agent for natural and synthetic rubber gaskets. C-70 is a very good solution for friction, so it makes easier to thread wires through the rubber grommets of industrial and civil electrical systems. High protective rating guarantees longer cable life cycle. It is an excellent dielectric, therefore it eliminates the corona effect on the TV antenna clamps and prevents short circuits or electric leakages. Highly water repellent, it protects from humidity. C-70 can be also utilized as a detaching agent in plastic moulding. Compatible with most materials.

Dielectric strength after solvent evaporation: 12 kV/mm (at 20°C)

Temperature resistance after solvent evaporation: -40°C + 200°C

Viscosity after solvents evaporation: 1000 mm²/s (at 20°C)

Density : 0,665 g/cm³ (at 20°C)
